SmartPayments™ EasyRetail Solution

Simple, Complete and Convenient

OVERVIEW | PRODUCT DATA | SPECIFICATIONS

Traditionally, only large retailers were able to benefit from PC based point-of-sale (POS) systems that featured customer facing POS terminals to facilitate the card swipe and PIN entry action. The reason for this is simple...integrated systems were traditionally more difficult to develop, install and manage and therefore were out of reach for most small businesses.

For Merchants
Today, the new Hypercom SmartPayments EasyRetail solution levels the playing field by bundling its highly secure, easy to install SmartPayments Client/Server software technology with Hypercom's customer friendly plug and play L4xxx terminal. With the merchant in mind, the Hypercom SmartPayments EasyRetail solution comes complete in a boxed kit that includes the:

- ▶ Hardward terminal device
- ▶ Associated cables
- ▶ Documentation
- ▶ CD (for software downloads)

Your days of hunting for different components are now over when you purchase the SmartPayments EasyRetail kit. We also include with every purchase, 30 FREE days of telephone support to the merchant. Your customers can now swipe or scan (Contactless is supported) their own cards and enter their PIN number in this customer friendly terminal.
