

*** Did you know?**

POSperfect II Sporting Goods

Independent Sporting Goods stores and chains are improving their business with **POSperfect II**. We track color, size, and season! See for your self by visiting www.posperfectinc.com and www.posperfect.com for additional details, documentation, and request a demonstration.

Integrate E-mail for receipts and customer marketing, plus add a customer information imaged right from the 2D drivers license barcode.

Bring the full power of **POSperfect II** to your Sports business and watch the bottom line improvements grow!

Our partner Opticon USA, Inc. packed features and functionality into the 1300 hand-held retail POS platform. This nimble device makes taking spot checks of inventory a breeze. The real strength comes from the ability to add a PO on the fly by scanning up and down the aisles. The data can then be sync into the POSperfect II system and the true power of a real POS solution comes into effect. These features provide today's retailer with the freedom & flexibility that drives productivity, increases sales and ROI.

POS perfect, Inc.

Hard Goods, Soft Goods, Specialty Foods, eCommerce and Accounting!

Barcode, SKU or PLU

A powerful Point of Sale (POS) System

Simply put, the retailer is not locked into the way a system is set up to report or track an inventory item. You can switch from SKU to PLU view and information. This allows a multi dimensional retailer such as a visitor center with a gift shop, café, and food offering to use one system for their business needs. Even if you have liquor, we've handled that expertly and have covered all the legal requirements. Just ask us about the 100 Lyons Stores!

POS Touch Screen or Keyboard

Fast, friendly POS function with flexibility for a variety of sales environments. Designed for even the non-computer savvy sales associate. Hard goods, soft goods, liquor, and even **Restaurant Table Management**. Our touch screen module is suitable for bars, coffee houses & restaurants. Multiple receipts per table. Split orders, tagged items, split items. The flexibility of this module when combined with a scanner scale can handle the fastest paced fruit and vegetable operations as well as specialty retail stores .

Customers

Create new customers and edit existing clientele. View Accounts Receivable balance and history. Your customers are your most important asset and they are the ones paying your bills. It sells, too, and it sells smartly! Using customer data, your store can generate gift certificates, run customer loyalty programs, even set up email contacts and customer touching efforts. The power of the information we hold and have available for easy use can effect in a positive manner your bottom line.

Inventory

Define profit centers by dividing your inventory into number of categories and departments. Track vendor's information. Automatically change the pricing for a single discount code, or all discount codes on any individual SKU or a group of items. New bar-coding options allow almost unlimited creativity in labeling. Displays quantity on hand and serial number look up. Records deliveries and purchase orders.

Reports

Powerful suite of 'drill down' & graphic reports, and bar code printing. Most reports can be run for any date or date range, and for any Store selection. The majority of reports have run-time options to consolidate store data into a single report and can also be exported in comma delimited format (e.g. ".csv") for use in 3rd party applications or spreadsheets. Our Corporate Controller can access data for any number or combination of stores.

eCommerce or Web Store

In today's retail world the old thinking of what a store front is no longer applies. Customers have become internet savvy and a whole new frontier of commerce and revenue opens up. So too does the need to be able to handle the inventory controls and tracking in this sales arena. We have been proactive, and can help you and your company with this endeavor.

QuickBooks Link or Built-In Accounting Module

For most of your transactions POSperfect II will make the entries automatically. A double entry system is used. This requires that every debit amount entered into a journal must have a corresponding credit entry or entries with a total equal to the debit amount.
